

A stem and a leaf

A stemplot displays each value as a stem and a final digit.

For the value 47, what stem and leaf could we use?

Reading the key

Synthetic file sizes. Key: 3 | 4 means 34 KB.

Stem	Leaves
2	1 5 5
3	0 4 8
4	2

What values does this stemplot display?

Build a stemplot

Synthetic file sizes (KB): 21, 25, 25, 30, 34, 38, 42.

How would you organize these values into a stemplot with a key?

Repeated values

Synthetic file sizes. Key: 2 | 5 means 25 KB.

Stem	Leaves
2	1 5 5
3	0 4 8
4	2

How many files have size 25 KB?

Decimal leaves

Synthetic response times: 1.2, 1.5, 1.5, 2.1, 2.8 seconds.

What key and stemplot would preserve every recorded value?

An empty stem

Synthetic file sizes (KB): 12, 15, 17, 31, 35.

Why should a stemplot include the stem 2?

A possible outlier

Synthetic response times: 1.1, 1.2, 1.3, 1.4, 1.6, 8.9 seconds.

Which value deserves investigation?

Keeping an unusual value

A recorded file size is much larger than all others.

What would you check before deciding whether to remove it?

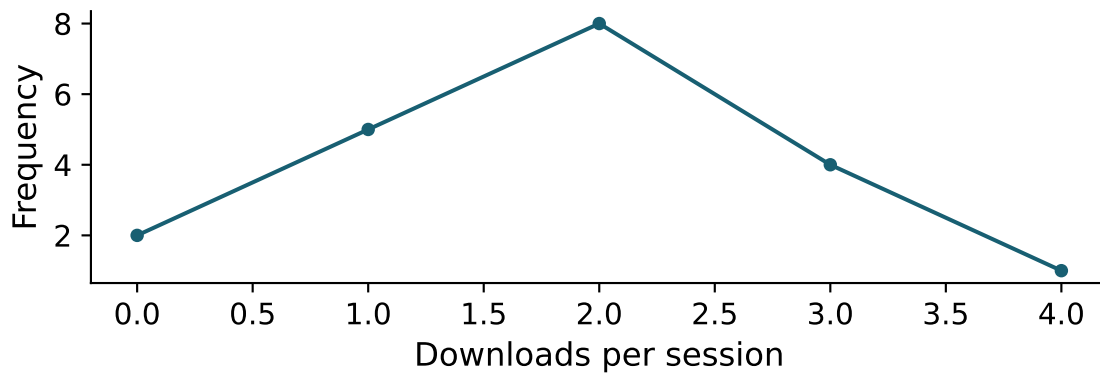

Comparing two groups

Synthetic file sizes (KB). A: 12, 14, 16, 21, 23.
B: 18, 21, 24, 27, 29.

How could a back-to-back stemplot compare the two groups?

A line graph

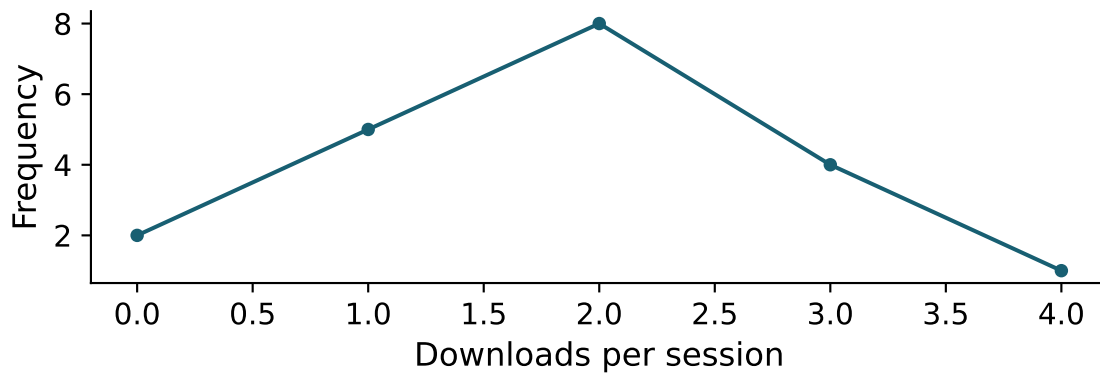

Synthetic downloads per session.

What does the peak show?

Frequency from a graph

Synthetic downloads per session.

How many sessions had at least three downloads?

Build a frequency line graph

Synthetic downloads per session.

Downloads	Sessions
0	2
1	5
2	8
3	4
4	1

Where should each frequency point be plotted?

A bar graph

A bar graph uses separate bars for categories. Synthetic notebook counts: blue 12, black 8, red 5.

What should the axes show?

Counts or proportions?

Synthetic notebook counts: blue 12, black 8, red 5.

What height should the blue bar have on a relative-frequency graph?

Category order

Synthetic notebook counts: blue 12, black 8, red 5.

Would changing the category order change the data being displayed?

Choose a display

A spreadsheet contains printer brands and file sizes in KB.

Which variable is suited to a stemplot?
