MATH 101 Unit 3: Polynomial, Rational, and Radical Functions - Practice 1

Version 202610122020.40 | Name: _____

Complete and show all work on a separate sheet of paper. Record final answers on the answer sheet. Give exact answers and simplify completely. Only a basic four-function calculator may be used. Suggested timed practice: 30 minutes.

Answer key follows the answer sheet. Attempt the test before checking it.

1. Find all zeros: (a) list Rational Root Theorem candidates, then test only 2 and -2; (b) use polynomial long division by the confirmed linear factor; (c) use the quadratic formula on the quotient. Record all zeros.

$$p(x) = x^3 - x^2 - 3x + 2$$

2. Find (a) domain; (b) hole, vertical asymptote, and horizontal asymptote; (c) both intercepts.

$$f(x) = \frac{(x-1)(x+3)}{(x-5)(x-1)}$$

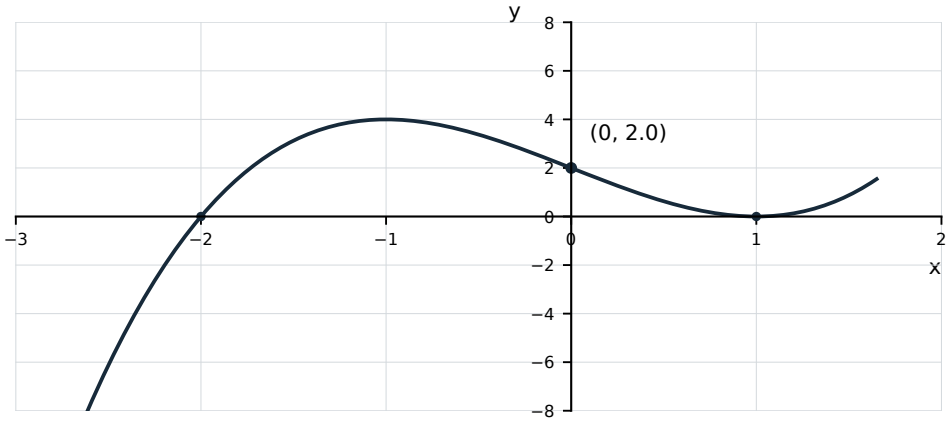

3. Find (a) domain and range; (b) both intercepts; (c) behavior as x tends to infinity and as x approaches the finite domain endpoint from within the domain.

$$f(x) = \sqrt{x+1} - 2$$

4. Find (a) the vertex and the minimum or maximum value (state which); (b) all zeros.

$$f(x) = (x+1)^2 - 4$$

5. Write the least-degree polynomial in factored form matching the graph and labeled point. State its end behavior in both directions.
