

## TSM 098 | INDEPENDENT PRACTICE

# Linear equations with numerical fractions

While TSM 099 studies Topic 29. Review: Topic 28.

Name: \_\_\_\_\_ Date: \_\_\_\_\_

Complete the core pages first; use the extension page for remaining time. Show all work here or on separate paper. Check answers after attempting each section and correct errors.

### Core: combine fractions on each side

1. Solve and check in the original equation.

$$\left(\frac{3x+4}{6}\right) + \left(\frac{x-3}{2}\right) = \left(\frac{2x-1}{4}\right)$$

2. Solve and check in the original equation.

$$\left(\frac{-2x+2}{5}\right) + \left(\frac{-1}{4}\right) = \left(\frac{x+6}{8}\right)$$

3. Solve and check in the original equation.

$$\left(\frac{3x+1}{3}\right) + \left(\frac{2}{4}\right) = \left(\frac{x+1}{2}\right)$$

4. Solve and check in the original equation.

$$\left(\frac{-3x-5}{2}\right) + \left(\frac{-x+4}{8}\right) = \left(\frac{-2x-6}{4}\right)$$

5. Solve and check in the original equation.

$$\left(\frac{-2x+2}{6}\right) + \left(\frac{x-1}{2}\right) = \left(\frac{-2x-6}{3}\right)$$

6. Solve and check in the original equation.

$$\left(\frac{-2x-2}{3}\right) + \left(\frac{4}{2}\right) = \left(\frac{-x-1}{5}\right)$$

### Core: numerical denominators on both sides

7. Solve and check in the original equation.

$$\left(\frac{3x-1}{3}\right) + \left(\frac{x-1}{2}\right) = \left(\frac{x+6}{6}\right)$$

8. Solve and check in the original equation.

$$\left(\frac{x+4}{2}\right) + \left(\frac{0}{4}\right) = \left(\frac{x+4}{5}\right)$$

9. Solve and check in the original equation.

$$\left(\frac{2x+1}{2}\right) + \left(\frac{x-4}{5}\right) = \left(\frac{0}{8}\right)$$

10. Solve and check in the original equation.

$$\left(\frac{-2x-3}{8}\right) + \left(\frac{3}{6}\right) = \left(\frac{-2x+4}{4}\right)$$

11. Solve and check in the original equation.

$$\left(\frac{-2x-4}{2}\right) + \left(\frac{x+1}{3}\right) = \left(\frac{-6}{6}\right)$$

12. Solve and check in the original equation.

$$\left(\frac{-2x+1}{3}\right) + \left(\frac{0}{4}\right) = \left(\frac{2}{8}\right)$$

### Core: signed numerators and fractions

**13.** Solve and check in the original equation.

$$\left(\frac{x-4}{2}\right) + \left(\frac{x-3}{4}\right) = \left(\frac{6}{6}\right)$$

**14.** Solve and check in the original equation.

$$\left(\frac{-2x-2}{5}\right) + \left(\frac{x+1}{8}\right) = \left(\frac{2}{2}\right)$$

**15.** Solve and check in the original equation.

$$\left(\frac{x+3}{4}\right) + \left(\frac{-x-1}{6}\right) = \left(\frac{-x+5}{3}\right)$$

**16.** Solve and check in the original equation.

$$\left(\frac{-2x+2}{3}\right) + \left(\frac{-x}{8}\right) = \left(\frac{-2x+4}{6}\right)$$

**17.** Solve and check in the original equation.

$$\left(\frac{-2x-4}{6}\right) + \left(\frac{-x-4}{4}\right) = \left(\frac{-2x+3}{2}\right)$$

**18.** Solve and check in the original equation.

$$\left(\frac{2x+5}{4}\right) + \left(\frac{x-2}{3}\right) = \left(\frac{2x+1}{6}\right)$$

### Extension: mixed fraction equations

**19.** Solve and check in the original equation.

$$\left(\frac{-2x-5}{3}\right) + \left(\frac{4}{2}\right) = \left(\frac{x-4}{4}\right)$$

**20.** Solve and check in the original equation.

$$\left(\frac{-2x-4}{8}\right) + \left(\frac{-x}{6}\right) = \left(\frac{5}{4}\right)$$

**21.** Solve and check in the original equation.

$$\left(\frac{2x+5}{4}\right) + \left(\frac{1}{6}\right) = \left(\frac{4}{3}\right)$$

**22.** Solve and check in the original equation.

$$\left(\frac{x+3}{5}\right) + \left(\frac{0}{3}\right) = \left(\frac{2x+5}{4}\right)$$

**23.** Solve and check in the original equation.

$$\left(\frac{2x+2}{8}\right) + \left(\frac{-x-2}{2}\right) = \left(\frac{-2x+4}{3}\right)$$

**24.** Solve and check in the original equation.

$$\left(\frac{-2x+4}{4}\right) + \left(\frac{-x}{3}\right) = \left(\frac{-2x-2}{2}\right)$$
